

Science-Oriented Computer Engineering: A New Era

Buğra akır; CEO, BEARTELL Inc.

Date: Mar 12, 2019, Tuesday @13:30

Place: ankaya University Central Campus Blue Auditorium

Abstract

Computer engineering and science area is in the brink of a new revolution. Computer scientists, who are designing new computer architectures and network infrastructures, developing software, testing and improving these systems, are preparing for a new age with the new trends in artificial intelligence, big data, and industry 4.0. We will talk about how computer science students, academics, and all from the industry should prepare and get ready for this new age.

Bio

Buğra akır graduated from Bařkent University Computer Engineering Department in 2003. He completed his Master's degree in Computer Engineering from Atılım University with a thesis in the area of "Multi-Agent Systems" under the supervision of Dr. Hrevren Kılı. He worked in the industry in different verticals including defense, big data, M2M, telco and more. Since 2014 he has been managing his own artificial intelligence firm. He is very active in applying Artificial Intelligence and related technologies in real world software products.
